Design, Quality and Prompt Delivery

# FOLDING ARM AWNINGS

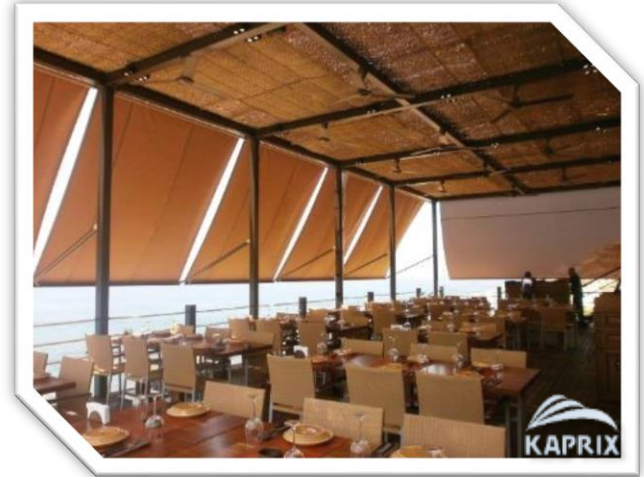

A folding arm awning is a material specially designed to block the rain or the sun without having to interfere with any existing structure or having to put up extra poles. They are mounted directly to the house and extended all over to the attached patio. They are convenient to use in any building whether private or commercial. The folding arm awning provides multiple advantages:

- ✓ Protection from daylight showers, the sun and also the direct ultra violet rays.
- ✓ Protection of the furniture and carpet from direct interference by excess heat.
- ✓ Create outdoor enjoyment.

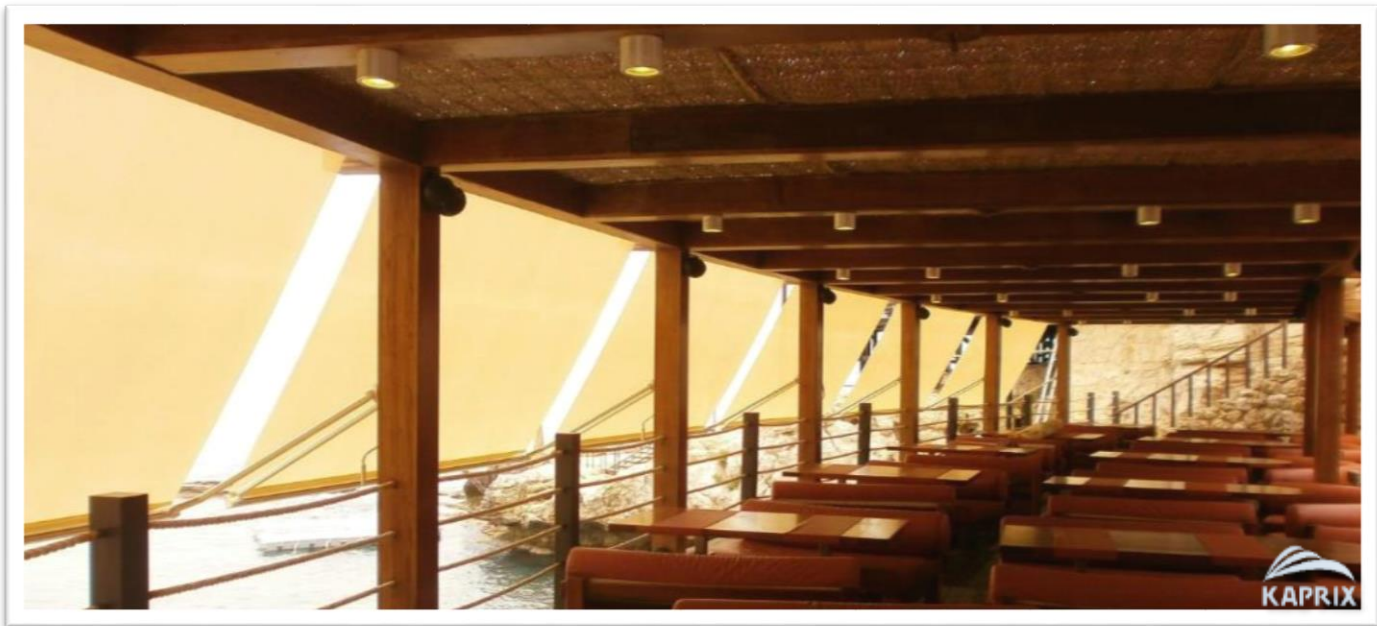

# RETRACTABLE AWNINGS

Create shade, protection and comfort through retractable and wind resistant awnings. The retractable awnings make your deck or patio cooler, while protecting your family and guests from harmful UV rays. It also helps to reduce your air conditioning bill by shading windows and glass doors from direct sunlight.

Retractable awnings transform outdoor spaces into brand new “rooms” that offer ultimate three-season flexibility and maximum versatility for relaxing and entertaining. Your awning will be there whenever you need it and neatly tucked away when you don’t!

# PERGOLAS

When it comes to maximizing the use of your outdoor space, nothing is better than a pergola. A pergola can transform your yard into a shady oasis and it can act as a decorative centerpiece. Pergolas come in all shapes and sizes and they make a great addition to any yard.

- ✓ Pergolas are highly versatile – they can be used as a stand-alone structure or as a lead-in to other structures such as outdoor dining areas or verandas.
- ✓ A pergola provides shade on hot summer days and protection from rain as well. It also helps to provide privacy from neighbors.
- ✓ It is possible to customize a pergola to complement the existing design scheme.

# SHADE SAILS

Shade sails are highly durable, temporary or permanent and form an effective way to enjoy the outdoors safe from both heat and ultra violet radiation. Perfect for a summer barbecue or providing a shaded area for the back yard shade sails are usually either triangular or quadrilateral in shape so depending on which design is decided upon, there will be three or four points needed for fixture. Allowing the free movement of air under the awning creates an additional cooling effect within the shade.

# ROLLER BLINDS

The roller blinds are usually mounted on the windows and panels of homes. They are made of sunlight resistant, long lasting fabric. There are a number of advantages of using roller blinds and sun screens for windows and panels:

- ✓ Reduces heat
- ✓ Prevents the damage of the valuable products placed in the room
- ✓ Maintains the privacy
- ✓ Reduces the glare

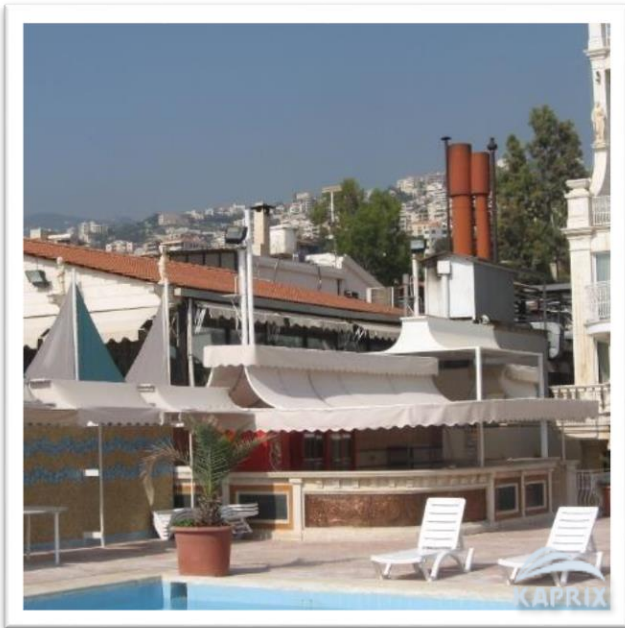

# TENTS
